

ARMANDO CHANTO CAMACHO

QA Lead — Software Quality Engineer — Test Automation

+506 8421-6779 — achanto98@gmail.com — LinkedIn

Professional Summary

QA Lead with 3 years of experience in Software Quality Assurance, specializing in functional, automated, API, and performance testing. Experienced in designing and maintaining scalable test automation frameworks, validating complex backend systems, and collaborating with cross-functional teams to deliver reliable, high-quality software in Agile environments. Strong background in Playwright, Postman, JMeter, and API automation in modern QA practices, with a passion for continuous improvement and quality engineering.

Experience

Muscle Points

Jan 2024 – Present

Remote / Hybrid

QA Lead

Jul 2025 – Present

- Coordinate functional, API, regression, and automated testing activities across multiple projects and product releases.
- Collaborate with developers, product owners, designers, and stakeholders to ensure quality requirements are understood and delivered.
- Support release validation and readiness through smoke, regression, exploratory, API, and performance testing prior to production deployments.
- Review requirements, user stories, acceptance criteria, and business rules to identify testing gaps and quality risks.
- Mentor junior QA team members on testing practices, defect reporting, and test execution.
- Contribute to continuous improvement of QA processes, test automation coverage, testing documentation, and release quality.
- Participate in Agile ceremonies and cross-functional discussions to support product quality and delivery.

QA Engineer

Jan 2024 – Jul 2025

- Executed manual functional, exploratory, regression, and responsive testing across Web, Mobile, and Desktop applications.
- Designed and executed performance test plans using JMeter, simulating up to 500 concurrent users to identify system bottlenecks.
- Designed and developed automated regression test suites using Playwright and the Page Object Model (POM).
- Implemented scalable automation using MCP Playwright with reusable components, selector management, and maintainable test architecture.
- Validated REST APIs using Postman, including contract testing, security validation, and JSON Schema validation.
- Used Cypress and Katalon Studio during the initial automation phase to develop proof-of-concept test suites.
- Validated HTML5/CSS3 implementation against Figma designs and managed defects using Jira.
- Collaborated with developers using Git/GitHub, pull requests, and code reviews to support software quality.

Technical Skills

Testing: Playwright, Cypress, Katalon Studio, Postman, RestAssured, JMeter

Languages: Java, JavaScript, SQL, Python, .NET / C#

Tools: Git, GitHub, Jira, TestRail, VS Code, Cursor, IntelliJ IDEA, Figma, Linear, MCP, Swagger/OpenAPI, GitHub Actions

Practices: Test Automation, Functional Testing, API Testing, Performance Testing, Regression Testing, Exploratory Testing, Smoke Testing, REST API Validation, JSON Schema Validation, SDLC, STLC, Agile/Scrum, Page Object Model (POM), Release Validation, Release Readiness

Key Achievements

- Reduced regression execution time by **60%** through Playwright automation.
- Designed performance testing scenarios supporting up to **500 concurrent users** using JMeter.
- Developed scalable automation frameworks using Playwright, MCP, and the Page Object Model (POM).
- Expanded automation coverage for critical booking, redemption, and API validation flows.
- Promoted internally from **QA Engineer** to **QA Lead** based on technical performance and team contribution.

Projects

Flow Redemption Platform | *Playwright, Postman, JMeter, GitHub*

- Automated end-to-end test flows for Hotels, Cars, and Flights modules within a loyalty redemption platform.
- Validated booking, payment, and redemption flows across responsive web applications.
- Implemented reusable automation components following the Page Object Model (POM).
- Designed and automated end-to-end test flows while implementing API regression suites with Postman and JSON Schema validation to improve backend reliability.
- Collaborated through Git/GitHub using pull requests and code reviews to maintain automation quality.

Education

Universidad Estatal a Distancia (UNED) <i>Bachelor's Degree in Computer Engineering</i>	2022 – 2025 <i>Graduated with Honors</i>
Oracle Next Education (ONE) <i>Back-End Development Certificate</i>	Apr 2023 – Oct 2023

Certifications

- Scrum Foundation Professional Certification (SFPC) – CertiProf (Feb 2024)
- ISTQB Certified Tester – Foundation Level (Scheduled Jul 2026)

Professional Development

Calidad de Conceptos Perú <i>ISTQB Foundation Level Course</i>	Feb 2025 – May 2025
Calidad de Conceptos Perú <i>ISTQB Test Management Course</i>	Jul 2025 – Aug 2025

Languages

- Spanish – Native
- English – Intermediate (B2)
